## Translucent Color Enhancer™

Translucent Color Enhancer™ is a premium grade semi-transparent (non-solid) concrete color stain designed to be used over the Solid Color Stain™ in a contrasting color. The Translucent Color Enhancer is NOT a paint. It is used to tint or enhance areas of relief or texture on stamped concrete surfaces to create an antiqued look. It is also used to create a faux finish by blending and layering multiple Translucent Color Enhancer colors.

### Features & Benefits:

- Semi-transparent finish easily tints and enhances the stamped concrete
- Premium water-based, modified-polymer formula
- Easily applied with a variety of tools, including the NewLook Applicator Brush and HVLP sprayers
- Non-reactive, non-acrylic, non-acetone based
- Match any color
- No VOCs, environmentally friendly
- Compatible with many sealers

### Colors & Packaging:

- Available in 80 standard colors. Custom color matching available
- X-Large (32 oz) size 3-part kit covers 600 - 1200 square feet
- Large (16 oz) size 3-part kit covers 300 - 600 square feet
- Small (4 oz) size 3-part kit covers 75 - 150 square feet
- Sample (2 oz) size 3-part kit covers 35 - 75 square feet

### Working Tips & Keys to Success:

Apply Translucent Color Enhancer with an HVLP or pump sprayer to decrease installation time. Re-brooming or backbrushing Translucent Color Enhancer will re-emulsify wet material. For effective color contrast, use a darker color of Translucent Color Enhancer over a lighter color of Solid Color Stain, e.g. dark brown Translucent Color Enhancer over light brown Solid Color Stain.

- Thoroughly prepare concrete surface by pressure washing
- Remove and clean sealers and soil from surface before staining
- Mix all components thoroughly
- Re-broom and backbrush Solid Color Stain until dry to touch to achieve desired opacity
- Always produce job site samples
